

**ON THE MANAGEMENT OF THE RISKS PROJECT AND
MULTIDIMENSIONAL ANALYSES CASE: SITUATIONS
DANGEROUS OF AN INDUSTRIAL SYSTEM**

Raoul Bilombo and Valeri Anastasievich Doliatovski

Abstract

The management of the risks requires to acquire a frame of mind that accepts to take in account in its gait the uncertainty and the events dreaded, partners mainly at random in order to measure the impacts of it and to take the actions of mastery that impose themselves. In these works of research, we propose a precious support so much to the level of the reflection that of the methods for all engineers and more globally all people, starting or experienced, brought to undertake a gait of management of the risks in a very open panel of activities, and of the multi-dimensional analyses of the risks project management.

Keywords and phrases: management, risks, risks project, multi-dimensional analyses.
