Abstract

Chebyshev polynomials of three variables and two parameters of the second kind are defined by G. Yasmin and A. Muhyi [G. Yasmin and A. Muhyi, Lie algebra $G(0, 1)$ and 3-variable 2-parameters Hermite polynomials, African Math. Union and Springer-Verlag GmbH Deutschland, Ein Teil von Springer Nature, 2018]. We define Chebyshev-like polynomials of the same type including them.

Keywords and phrases: Chebyshev-like polynomials, three variables and two parameters.
