Abstract

Dattoli et al. [G. Dattoli, S. Lorenzutta, A. M. Mancho and A. Torre, Generalized polynomials and associated operational identities, *J. Comput. Appl. Math.* 108(1-2) (1999), 209-218] (see also [Giuseppe Dattoli, Paolo E. Ricci and Clemente Cesaro, A note on Legendre polynomials, *Int. J. Nonlinear Sci. Numer. Simul.* 2(4) (2001), 365-370]) defined the hybrid Laguerre-Hermite polynomials ${}_2L_n(x, y)$. Using them, we give a representation of the Lie algebra K_5 .
