

**THE HUBBLE PARAMETER OF THE
PERFECT FLUID UNIVERSE**

Włodzimierz Borgiel

Received May 6, 2016

Abstract

The paper presents the Hubble parameter of the perfect fluid universe and it has given in a nonsingular case analytical forms of the Hubble parameter by the assumption that $k = 2$ in the equation $G_{ab} + \Lambda g_{ab} = kT_{ab}$.

Keywords and phrases: Robertson-Walker spacetime, Hubble parameter.
